

Armoracia rusticana

PERENNIAL HERB

Horseradish

Horseradish belongs to the Mustard family. It has a very thick, pungent, and fleshy taproot system, which gives rise to many fleshy side roots in the surface of the soil. Very vigorous.

PLANTING: Transplant 1' apart in deep rich soil with crown 1" below soil level. Plant in late winter or early spring.

CULTURE: Does best in moist soils in cool regions. Grow it in a sunny, out-of-the-way corner.

FERTILIZING: Horseradish can actually take quite a lot of neglect. It is a vigorous, spreading plant not requiring fertilizer.

HARVESTING: Dig roots in the fall, after the tops have been exposed to frost.

STORAGE: Store in a plastic bag in the fridge.
