

Recipe Card for the Container Design of the Month

Designed by Cait Deever

Design of the Month

January

Tropical Winter Days

1. *Calathea con.* 'Freddie'
2. *Chamaedorea elegans*
3. *Scindapsus p.* 'Argyraeus'
4. *Syngonium podophyllum*
5. *Davallia tyermanii*

STEPS:

1. Fill your container 2/3 of the way with all-purpose Potting Soil such as *E.B. Stone Edna's Best*.
2. Mix some fertilizer into the soil in the container. We have always had exceptional results with *E.B. Stone Sure Start*.
3. Moistening the soil so it is damp is an important step if your potting soil is old or on the dry side. Most fresh bags of soil should take up water evenly when you water the plants.
4. Plant your container. It helps to gently loosen the roots of each plant to enhance root development.
5. Fill the nooks and crannies with moist potting soil.
6. Water your newly planted container thoroughly and enjoy!

SUBSTITUTIONS:

Sometimes you cannot find the exact cultivated variety we have listed above. Luckily there are substitutions that will offer a similar or even preferred look.

CARE AND MAINTENANCE:

The houseplants in this container will thrive in bright, indirect light (near a bright window without direct sun is best). This combination will give color and textural interest year-round. Water thoroughly when the top inch of soil is dry. The plants will become overcrowded in a year or two. At this point separate them or up-pot to a larger container.
