

FIG VARIETIES FOR 2026

Figs are not only a sweet, delicious summer treat, they are easy to grow and their beautiful foliage and form add a tropical look to the garden.

Green, bronze, and mahogany colored fruit with juicy amber or red flesh ripens during hot summer months. Ripe fruit will be soft to the touch and will wilt on the stem. Many of our varieties produce a second crop of fruit in September. All of the varieties we carry are self-fertile.

Fig trees are pest-free, adaptable to many climate and soil conditions, and drought tolerant once established. They can be pruned to stay small, espaliered along a fence or hot wall, or allowed to sprawl, but they only fruit on the newest growth, so keep that in mind when choosing your form.

We often have more varieties of figs in small (#1) pots than in large sizes. Ask about where our small fruit trees are stocked. *We're happy to help!*

Grows to 15-20', loves sun and heat, hardy in USDA Zones 7-9.

BROWN TURKEY	Med-large fruit with brown-maroon skin and sweet, juicy, firm, meaty flesh. Excellent all-purpose. Ripens in September.
DOMENICO TAURO	Very large, flavorful, purple-brown fruit with juicy, reddish flesh on this short-season, Italian variety. Often two crops, with fewer, larger fruits July-Aug, and plentiful, smaller fruits Sept-Oct.
KING	Heavy yielding variety produces large, high quality, green fruit with amber flesh. Great fresh, canned, or dried.
LATTARULA (Italian Honey)	Greenish-yellow fruit with sweet, amber colored flesh. Good all-purpose. Well adapted to the PNW. May ripen two crops, one in July and one in September.
LITTLE RUBY	Dwarf! Small purple fruit with a jammy texture and excellent flavor on a tiny tree. Little Ruby is a good candidate for container growing at 3-6' tall. Z6.
LONGUE D'AOÛT	One of the earliest, with its second crop often starting in August. Green-purple fruit with amber-pink flesh, and sweet flavor with hints of melon.
LSU GOLD	Large, gorgeous golden fruit blushed ruby, with outstandingly sweet, amber-pink flesh. Compact habit to 10-12'.
NEGRONNE	Vigorous, extremely hardy Mission-type fig suited to cooler areas. Produces two crops of small, jet-black fruit with deep red flesh and fine flavor.
OLYMPIAN	Green-purple striped fruits with flavorful, violet flesh. Usually produces two crops per year. Hybridized in Olympia, WA so well suited to the cooler maritime climate of the PNW.
PETER'S HONEY	Lovely, greenish-yellow fruit with dark amber flesh and very sweet flavor super for fresh eating. Requires plenty of hot sun to ripen fully.
PETITE NEGRA	Dwarf! Naturally 3-4' tree suitable for pot culture. Fruit is large, black, and richly sweet.
STELLA	Suited to cooler climates, Stella yields large fruit with sweet, reddish-purple flesh.
VERN'S BROWN TURKEY	Brown fruit with sweet, amber flesh. Excellent all-purpose. Reliable producer, two crops in most years. Ripens July-Sept.
